WHMCS Server Module Installation

1) Login to www.VPNresellers.com for your API key/Access token.

2) Using FTP or SSH, create a folder called 'vpnresellers' in the directory /modules/ servers on your server.

3) Using FTP, transfer the file "vpnresellers.php" and "clientarea.tpl" to the directory you just created: /modules/servers/vpnresellers

4) Navigate to your WHMCS Admin Panel and log in
5) Create a new Product
6) Under the 'Module Settings' Tab for module name select 'vpnresellers'
   a. Copy and paste the API key/Access token into field Access token (see step 1)
   B. Choose when you would like the service to be setup

7) Under the 'Custom Fields' Tab
   a. Field Name: "Username"
   b. Field Type: "Text Box"
   c. Description: "Username for your VPN account"
      i. This is merely an example, use whatever you deem best.
   d. Validation: "/^[a-z\d_]{4,28}$/i"
      i. A username between 4 and 28 characters in length, alpha-numeric, and allowing underscores
   e. Check "Required Field" and "Show on Order Form"
   f. Save changes

Field Name	Username				Display Order	0
Field Type	Text Box	*				
Description	Username for your VPN account			The explanation to show users		
Validation	/^[a-z\d_]{4,28}$/i			Regular Expression Validation String		
Select Options				For Dropdowns Only - Comma Seperated List		

☐ Admin Only   ☑ Required Field   ☑ Show on Order Form   ☐ Show on Invoice   **Delete Field**

8) In your email template for service creation you can use the following merge fields to display the customers username and generated password.
   a. Username: "{$service_custom_fields.0}"
   b. Password: "{$service_password}"
      i. When users update their service password it will automatically update our databases.
9) Finish your product configuration and you're done!
